

0.0 Welcome to the Todd Lammler N10-008 Course!	
1.0 Module 1 - Introducing Reference Models and Protocols	
	1.1 OSI Model
	1.2 TCP/IP Model
	1.3 IP, ICMP, UDP, and TCP
	1.4 IP, UDP, and TCP Headers
	1.5 Maximum Transmission Unit (MTU)
	1.6 Ports and Protocols
2.0 Module 2 - Network Pieces and Parts	
	2.1 Analog Modems
	2.2 CSMA/CD vs CSMA/CA
	2.3 Hubs, Switches, and Routers
	2.4 Collision and Broadcast Domains
	2.5 Wireless Access Points
	2.6 Firewalls
	2.7 Intrusion Detection and Prevention
	2.8 VPN Concentrators
	2.9 Load Balancers
	2.10 Advanced Filtering Appliances
	2.11 Proxy Server
3.0 Module 3 - Describing Network Topologies	
	3.1 Star Topology
	3.2 Mesh Topology
	3.3 Ring Topology
	3.4 Bus Topology
	3.5 Point-to-Point Topology
	3.6 Point-to-Multipoint Topology
	3.7 Hybrid Topology
	3.8 Client-Server Network
	3.9 Peer-to-Peer Network
	3.10 Local Area Network (LAN)
	3.11 Wide Area Network (WAN)
	3.12 Metropolitan Area Network (MAN)
	3.13 Campus Area Network (CAN)
	3.14 Personal Area Network (PAN)
	3.15 Wireless LAN (WLAN)
	3.16 Software-Defined WAN (SD-WAN)
	3.17 Industrial Control Systems and SCADA
4.0 Module 4 - Understanding Network Services	
	4.1 Virtual Private Networks (VPNs)
	4.2 Dynamic Multipoint VPNs (DMVPNs)
	4.3 Web Services
	4.4 Voice Services
	4.5 DHCP
	4.6 DNS
	4.7 NAT
	4.8 NTP

	4.9 SDN
	4.10 IoT
	4.11 SIP Trunks
5.0 Module 5 - Selecting WAN Technologies	
	5.1 Packet Switched vs. Circuit Switched Networks
	5.2 Cellular
	5.3 Frame Relay
	5.4 ATM
	5.5 Satellite
	5.6 Cable
	5.7 PPP
	5.8 PPPoE
	5.9 DSL
	5.10 Leased Lines
	5.11 ISDN
	5.12 MPLS
	5.13 Metro Ethernet
6.0 Module 6 - Connecting Networks with Cables and Connectors	
	6.1 Copper Cables
	6.2 Fiber Cables
	6.3 Copper Connectors
	6.4 Fiber Connectors
	6.5 Media Converters
	6.6 Transceivers
	6.7 Termination Points
	6.8 Cabling Tools
	6.9 Punch-Down Blocks
	6.10 T568 Standards
	6.11 Straight-Through vs. Crossover Cables
	6.12 Ethernet Standards
7.0 Module 7 - Using Ethernet Switches	
	7.1 MAC Addresses
	7.2 Ethernet Switch Frame Forwarding
	7.3 VLAN Theory
	7.4 Trunking Theory
	7.5 Voice VLANs
	7.6 Ethernet Port Flow Control
	7.7 Power over Ethernet (PoE)
	7.8 Introducing Spanning Tree Protocol (STP)
	7.9 STP Port States
	7.10 STP Example
	7.11 STP Convergence Times
	7.12 STP Variants
	7.13 Link Aggregation
	7.14 Port Mirroring
	7.15 Distributed Switching
8.0 Module 8 - Demystifying Wireless Networks	

	8.1 Introduction to Wireless LANs (WLANs)
	8.2 WLAN Antennas
	8.3 Wireless Range Extenders
	8.4 WLAN Frequencies and Channels
	8.5 WLAN Standards
	8.6 Regulatory Impacts of Wireless Channels
9.0 Module 9 - Addressing Networks with IPv4	
	9.1 Binary Numbering
	9.2 Binary Practice Exercise #1
	9.3 Binary Practice Exercise #2
	9.4 IPv4 Address Format
	9.5 Public vs. Private IPv4 Addresses
	9.6 IPv4 Unicast, Broadcast, and Multicast
	9.7 The Need for Subnetting
	9.8 Calculating Available Subnets
	9.9 Calculating Available Hosts
	9.10 Subnetting Practice Exercise #1
	9.11 Subnetting Practice Exercise #2
	9.12 Calculating Usable Ranges of IPv4 Addresses
	9.13 Subnetting Practice Exercise #3
10.0 Module 10 - Addressing Networks with IPv6	
	10.1 Hexadecimal Numbering
	10.2 IPv6 Address Format
	10.3 Shortening an IPv6 Address
	10.4 IPv6 Address Shortening Exercise
	10.5 IPv6 Global Unicast
	10.6 IPv6 Multicast
	10.7 IPv6 Link Local
	10.8 IPv6 Unique Local
	10.9 IPv6 Loopback
	10.10 IPv6 Unspecified
	10.11 IPv6 Solicited-Node Multicast
	10.12 EUI-64 Address
	10.13 IPv6 Autoconfiguration
	10.14 IPv6 Traffic Flows
	10.15 Dual Stack
	10.16 Tunneling IPv6 Through an IPv4 Network
	10.17 IP Address Management (IPAM)
11.0 Module 11 - Explaining IP Routing	
	11.1 Packet Flow in a Routed Network
	11.2 Static and Default Routes
	11.3 Routing Protocols
	11.4 RIP
	11.5 OSPF
	11.6 EIGRP
	11.7 BGP
	11.8 Subinterfaces

12.0 Module 12 - Streaming Voice and Video with Unified Communications	
	12.1 Voice over IP
	12.2 Video over IP
	12.3 Unified Communications Networks
	12.4 Quality of Service (QoS) Fundamentals
	12.5 QoS Markings
	12.6 QoS Traffic Shaping and Policing
13.0 Module 13 - Virtualizing Network Devices	
	13.1 Virtualized Devices
	13.2 Virtual IP
	13.3 Storage Area Network (SAN) Technologies
	13.4 Using InfiniBand for SANs
	13.5 Cloud Technologies
	13.6 Accessing Cloud Services
	13.7 Infrastructure as Code
	13.8 Multi-Tenancy
14.0 Module 14 - Securing a Network	
	14.1 General Security and Availability Issues
	14.2 Vulnerabilities and Exploits
	14.3 Denial of Service Attacks
	14.4 On-Path Attacks
	14.5 VLAN Hopping Attacks
	14.6 Social Engineering Attacks
	14.7 Other Common Attacks
	14.8 Common Defense Strategies
	14.9 Switch Port Defense
	14.10 Access Control Lists
	14.11 Wireless Security Options
	14.12 Extensible Authentication Protocols (EAPs)
	14.13 Authentication Servers
	14.14 User Authentication
	14.15 Physical Security
	14.16 Forensic Concepts
	14.17 Securing STP
	14.18 Router Advertisement (RA) Guard
	14.19 Securing DHCP
	14.20 IoT Security Concerns
	14.21 Cloud Security
	14.22 IT Risk Management
15.0 Module 15 - Monitoring and Analyzing Networks	
	15.1 Device Monitoring Tools
	15.2 SNMP
	15.3 Remote Access Methods
	15.4 Environment Monitoring
	15.5 Wireless Network Monitoring
16.0 Module 16 - Examining Best Practices for Network Administration	
	16.1 Safety Procedures

	16.2 Wiring Management
	16.3 Power Management
	16.4 Rack Management
	16.5 Change Control
	16.6 High Availability
	16.7 Cloud High Availability
	16.8 Active-Active vs. Active-Passive
	16.9 Disaster Recovery
	16.10 Standards, Policies, and Rules
	16.11 Documentation
	16.12 Site Survey
17.0 Module 17 - Troubleshooting Networks	
	17.1 7-Step Troubleshooting Methodology
	17.2 CLI Troubleshooting Utilities
	17.3 Network Appliance Commands
	17.4 Device Metrics and Sensors
	17.5 Environmental Metrics and Sensors
	17.6 Common LAN Issues
	17.7 Common Wireless Network Issues
	17.8 Common Network Service Issues
	17.9 General Networking Issues
18.0 Module 18 - Preparing for the CompTIA Network+ Exam	
	18.1 How to Register for the Exam
	18.2 Study Strategies
	18.3 What to do on Exam Day
19.0 Wrap-Up
